

CSE 202 Offline (Section A)

Server window will be like this:

The client list is maintained using a *TableView*. Initially the list will be empty and will populate when a client connects to the server. The server will select a client from the list and will type a message in the *Message Box*. The message will be send to the client by clicking the *Send* button beside the client name in the list. After that the server will remove the client from the list.

Client window will be like this:

The client will provide its name and will connect to the server by clicking the *Connect* button. After that the client will show the following window and wait for the message to be received from the server. The client will display the message received from the server in the *TextArea*.
